This presentation has been prepared by Karoon Gas Australia Ltd for professional and sophisticated investors. The information contained in this presentation is for information purposes only and does not constitute an offer to issue, or arrange to issue, securities or other financial products. The information contained in this presentation is not investment or financial product advice and is not intended to be used as the basis for making an investment decision. The presentation has been prepared without taking into account the investment objectives, financial situation or particular needs of any particular person.

No representation or warranty, express or implied, is made as to the fairness, accuracy, completeness or correctness of the information, opinions and conclusions contained in this presentation. To the maximum extent permitted by law, none of Karoon Gas Australia Ltd, its directors, employees or agents, nor any other person accepts liability, including without limitation, any liability arising out of fault or negligence, for any loss arising from the use of the information contained in this presentation. In particular, no representation or warranty, express or implied is given as to the accuracy, completeness or correctness, likelihood of achievement or reasonableness of any forecasts, prospects or returns contained in this presentation nor is any obligation assumed to update such information. Such forecasts, prospects or returns are by their nature subject to significant uncertainties and contingencies.

Before making an investment decision, you should consider, with or without the assistance of a financial adviser, whether an investment is appropriate in light of your particular investment needs, objectives and financial circumstances. Past performance is no guarantee of future performance.

The distribution of this document in jurisdictions outside Australia may be restricted by law. Any recipient of this document outside Australia must seek advice on and observe any such restrictions.

Petroleum exploration relies on the interpretation of complex and uncertain data and information which cannot be relied upon to lead to a successful outcome in any particular case. Petroleum exploration is inherently uncertain and involves significant risk of failure. All information regarding Prospective resource estimates and other information in relation to Karoon’s assets is given in the light of this caution.

This presentation may contains certain “forward-looking statements” with respect to the financial condition, results of operations and business of Karoon and certain plans and objectives of the management of Karoon. Forward looking statements can generally be identified by words such as ‘may’, ‘could’, ‘believes’, ‘plan’, ‘will’, ‘likely’, ‘estimates’, ‘targets’, ‘expects’, or ‘intends’ and other similar words that involve risks and uncertainties, which may include, but are not limited to, the outcome and effects of the subject matter of this presentation. Indications of, and guidance on, future exchange rates, capital expenditure, earnings and financial position and performance are also forward-looking statements.

You are cautioned not to place undue reliance on forward looking statements as actual outcomes may differ materially from forward looking statements. Any forward-looking statements, opinions and estimates provided in this presentation necessarily involve uncertainties, assumptions, contingencies and other factors, and unknown risks may arise, many of which are outside the control of Karoon. Such statements may cause the actual results or performance of Karoon to be materially different from any future results or performance expressed or implied by such forward looking statements. Forward-looking statements including, without limitation, guidance on future plans, are provided as a general guide only and should not be relied upon as an indication or guarantee of future performance. Such forward looking statements speak only as of the date of this presentation.

Karoon disclaims any intent or obligation to update publicly any forward-looking statements, whether as a result of new information, future events or results or otherwise.
Corporate Overview:

Managing Director, Robert Hosking
Karoon seeks to create shareholder value through an exploration led growth strategy

- Karoon is a global oil and gas independent
- Current market cap A$460 million (17/9/15, A$1.87ps)
- A$553 million cash at bank as at 30/6/15, No debt
- 246.8 million ordinary shares on issue, 6.2 million unlisted rights and options
- Member S&P / ASX 200 Index
The Development Pathway

Upon appraisal success in the Santos Basin, Karoon is looking to transition into an oil producer

- The Kangaroo and Echidna oil discoveries have a combined gross contingent 2C resource of 129mmbls (84mmbbls net to Karoon)

- Further appraisal drilling will better define the contingent resources and recovery factors which are required prior to moving into an early production system

- Analysis of pre-FEED development options in this setting show that a FPSO style development is feasible (an analogue is the producing Baúna e Piracaba field to the south)

- A staged appraisal and development program is planned with a decision point for an early production system expected post the 2016 appraisal program

- A staged program is optimal for managing project risk and capital requirements, on success first oil from an early production system is expected in 2019

- The exploration and appraisal success in Brazil to date is due to the quality of the exploration and engineering team

- Karoon is building on these capabilities with a new highly experienced project development team
Resource Update:

Exploration Manager, Antonio Tisi
Santos Basin Brazil: The Setting
**Field Evaluation Progress**

**Geoscience Evaluation:**
- Detailed mapping with 2 millisecond 3D seismic data set, geological correlation and facies interpretation
- Integration of all wireline and sampling data (cores, cuttings and recovered oil)
- Building detailed calibrated reservoir distribution and properties models
- Generating matching and integrating seismic attribute models tied to well data

**Engineering and Economic Evaluation:**
- Pre-FEED studies identifying and assessing a range of development options
- Evaluate early production system (‘EPS’) versus full field development (‘FFD’) project economics
- Assessing economic sensitivity to the recoverable resource range and oil price
- Identifying and costing development components preparing for a final investment decision (‘FID’), eg FPSOs, Storage vessels etc.

Generating integrated field production simulation models for optimizing resource recovery and development design

* The contingent resource volumes represent Karoon’s internal management estimates and have not necessarily been validated or agreed by joint venture partner Pacific Exploration and Production Corporation.

** Arithmetic summation by category

The Kangaroo and Echidna contingent resource volumes in the table above have been disclosed in Karoon’s announcement ‘Contingent Resource Volume Update: Santos Basin Brazil’, posted alongside this presentation on the ASX 17 September 2015.

Karoon is not aware of any new information or data that materially affects the resource estimates and all material assumptions and technical parameters underpinning the estimates in the ‘Contingent Resource Volume Update: Santos Basin Brazil’ announcement continue to apply and have not materially changed.
Mapping and Seismic Attributes

AVO calibrated at Paleocene level shows;

- Excellent match of AVO anomaly results with mapping and pressure data defining the distribution of oil at Echidna and Kangaroo

- Additional potential identified at the Emu Updip, Joey and Bilby Updip prospects to date

- Additional prospectivity possible at Puggle Lead and Platypus Paleocene Lead
Greater confidence in resource certainty at Kangaroo due to:

- Greater well control post Kangaroo-2 and side tracks
- Higher quality 2 millisecond 3D seismic data
- Core samples (MSCT*) obtained, providing good data on reservoir characteristics

This has resulted in a model that shows a close correlation between the observed oil columns and the seismic attributes.

Note: Joey prospect volumes are not included in the Kangaroo contingent resource

* MSCT: Mechanical sidewall coring tool
Greater confidence in resource certainty at Echidna due to:

- A good match between the seismic amplitude anomalies and the oil water contacts calculated from pressure data.

- Higher quality seismic indicates faulting intensity and steepness of dips are both significantly less than that seen at Kangaroo

- Core samples (MSCT*) obtained, providing good data on reservoir characteristics

Note: Emu Updip prospect volumes are not included in the Echidna contingent resource

* MSCT: Mechanical sidewall coring tool
The Appraisal Plan (‘PAD’) was approved by the Brazilian oil and gas regulator, the Agência Nacional do Petróleo, Gás Natural e Biocombustíveis (‘ANP’) during August 2015.

**Firm Commitments – Period ends 31 December 2018**

- Two wells (expected) in the Emu / Echidna area
- Acquisition and processing of a 3D seismic survey over the full PAD acreage
- Pre-stack depth migration of existing 3D seismic data in 2 millisecond frequency

**Contingent Commitments – Period commencing 1 January 2019**

- Drilling up to four contingent wells
- Each contingent well drilled will result in a 6 month extension to the contingent period
- Therefore maximum time for the contingent commitment period is 24 months
Project Management Team
&
Development Concepts:

Project Development Advisor, José Formigli
Project Manager, Ricardo Abi-Ramia
<table>
<thead>
<tr>
<th>Name</th>
<th>Role</th>
<th>Experience/Responsibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>José Formigli</td>
<td>Project Development Advisor</td>
<td>A petroleum engineer with over 30 years experience in planning, designing, implementing and operating production systems in shallow, deep and ultra-deep waters in Brazil. Worked for 32 years with Petrobras in various activities related to well construction, subsea and topsides engineering. Occupied managerial positions mostly in the Campos and Santos Basins. Held position of Chief Exploration &amp; Production Officer at Petrobras. Key responsibilities include oversight of the overall project and due diligence review.</td>
</tr>
<tr>
<td>Ricardo Abi-Ramia</td>
<td>Project Manager</td>
<td>Petroleum Engineer with 22 years of experience at Petrobras. Roles included General Manager of Rio de Janeiro Business Unit, Operations Manager for 3 years at Petrobras America in Houston, and Asset Manager of the Manati field (210 MMscf/d offshore gas field in northeast Brazil), the Marlim field, and the Albacora Leste field (160,000bbl/d field in Campos Basin Brazil) including the responsibility for the field development. Key responsibilities include project design, and implementation along with ongoing maintenance.</td>
</tr>
<tr>
<td>Oliver Seybold</td>
<td>Reservoir Team Leader</td>
<td>Reservoir Engineer with 25 years experience working on reservoir and simulation projects in Australasia, Europe, the Middle East, Africa, and South America. Reservoir experience includes work on clastic and carbonate reservoirs, fractured basements and oil (light, heavy, sour), gas and gas condensate fields. Key responsibilities include leading reservoir modelling for Echidna and Kangaroo.</td>
</tr>
<tr>
<td>Lino Barro</td>
<td>Engineering Manager (based in Melbourne)</td>
<td>Over 35 years experience in reservoir and development engineering and project economic evaluation. Key responsibilities include lead roles in subsurface development planning, field development plan preparation and implementation, and economic evaluation of projects located in Australia, the Persian Gulf, South America and Tunisia. Previously worked in Australia and internationally with BHPB, Kufpec and Delhi. Head office Engineering Manager.</td>
</tr>
</tbody>

Offshore projects are capital intensive and complex undertakings requiring a phased ‘gated’ process to select and execute on development.

Key Phases and Elements:

Appraisal and Selection:
- Develop a robust reservoir model
- Maximise well performance
- Select the right subsea and surface facility

Selection:
- Establish the design basis
- Generate development scenarios
- Develop decision drivers

Ref: Selecting the Right Field Development Plan – Richard D’Souza, Granherne
Key Attributes of Karoon’s Blocks
- Water Depth: 270 – 400 meters
- Oil API Gravity: 33 – 40 degrees
- Estimated oil production per well: 10,000 bpd

Key Development Drivers
- Flexibility to adapt to reservoir behaviour
- Minimise technical risks
- Maximise hydrocarbon recovery
- Schedule to first oil
- Flexibility for expansion
- Reducing upfront capex
- Operability, reliability and availability
- Capitalise on market conditions
- Maximising returns on capital invested
A FPSO facility with subsea completions connected through flexible lines is the primary choice for this kind of offshore field scenario in Brazil.

<table>
<thead>
<tr>
<th>Consideration</th>
<th>Strategy / Advantages</th>
</tr>
</thead>
</table>
| FPSO Production Unit               | - Flexibility for expansion  
- Minimise technical risks  
- Proved field development solution  
- FPSO lease rate differential between smaller and larger vessels is compressing  
- Capitalising on market conditions  
- Operability, reliability and availability  
- Utilising the same unit for EPS and FFD will expedite the FFD first oil |
| Subsea Completions                 | - Better positioning of wellheads  
- Flexibility to adapt to reservoir behaviour  
- Maximise hydrocarbon recovery  
- First Oil schedule |
| Well Performance and Reservoir Behaviour | - Appraisal wells  
- Phased development |
| Advantages of an EPS               | - Reduction of uncertainties on well performance and reservoir behaviour  
- Expediting production start-up  
- Obtain information to optimise the FFD |

The three development concepts outlined in this presentation all consider an EPS as phase one.
The objective of an EPS is to evaluate reservoir behavior and as a result get technical parameters required for a better design of the Definitive System.

The EPS likely comprises:
- Leased FPSO
- 2 horizontal production wells
- 1 gas injector well
- Estimated production: 20,000 bpd
- Flexible lines
An EPS followed by FFD is a proven field strategy. This approach was used recently in Brazil in the following development:

1 - Tiro e Sidon (now Baúna e Piracaba) EPS

- Early Production System: 20,000 bpd
- 2 Production Wells
- Investment: US$ 160MM

Full Field Development

- Definitive System
- Production: FPSO 100,000 bpd
- Production wells: 6
- Water Injection Wells: 4
- Gas Injection Well: 1

Ref: UN-BS Presentation – Situação dos Projetos na Bacia de Santos COGEN website

Citigroup’s March 2014 Global Oil Vision estimated Baúna e Piracaba breakeven oil price was approximately US$40/bbl.
Significant Cost Components

**Capital Expenditure**
- Appraisal wells (vertical) US$30-40 million per well
- Horizontal producers US$140-185 million per well*
- Gas and water injectors US$100-145 million per well*

Capex includes:
- Well costs
- Subsea completions, well heads, umbilicals, risers and flowlines
- Insurance, engineering costs, project management and contingency

* The high side is a result of the flowlines and umbilicals required to tie Kangaroo back to the FPSO located over the Echidna field (approximately 15km away) in a combined development case.

**Operating Expenditure**
Total operating expenditure is expected to be approximately US$400-450k per day

Opex includes:
- FPSO leasing costs
- Logistics
- Chemicals / Helicopters / Shore Base

Note: All cost estimates provided above are based on current information and are estimates only.
Concept 1. Echidna and Kangaroo

**Development Concept:**
Contingent 2C Resource: 129mmbbls (84mmbbls net to Karoon)

**EPS**
- Production per well: 10kbpd
- 2 Horizontal Producers
- 1 Gas Injector

**FFD**
- Production per well: 10kbpd
- 10 Horizontal Producers
- 4 Gas Injectors
- 4 Water Injectors

* The FFD total well count includes the wells drilled in the phase one EPS.
Concept 2. Echidna Standalone

**Development Concept:**
Contingent 2C Resource: 75mmbbls
(49mmbbls net to Karoon)

EPS
- Production per well: 10kbpd
- 2 Horizontal Producers
- 1 Gas Injector

FFD*
- Production per well: 10kbpd
- 5 Horizontal Producers
- 2 Gas Injectors
- 2 Water Injectors

* The FFD total well count includes the wells drilled in the phase one EPS.
Concept 3. Echidna and Kangaroo

**Development Concept:**
Contingent 3C Resource: 252mmbbls (164mmbbls net to Karoon)

**EPS**
- Production per well: 10kbpd
- 2 Horizontal Producers
- 1 Gas Injector

**FFD**
- Production per well: 10kbpd
- 13 Horizontal Producers
- 4 Gas Injectors
- 6 Water Injectors

*The FFD total well count includes the wells drilled in the phase one EPS.*
Current Estimate Milestones

Decision points to consider EPS and FFD project sanction.
Summary:

Managing Director, Robert Hosking
Key Points

- Increased confidence in the contingent resource volumes, strong production test results, and the shallow water and shallow reservoir setting continue to support the potential for a combined or standalone development option

- The development type under consideration, subsea development to an FPSO, is a proven, reliable and uncomplicated system

- Karoon has put in place a very experienced project management team

- Appraisal drilling is the next step for the project and represents a critical decision point

- Size of development is manageable and appropriate for Karoon’s size

- Karoon’s high equity interest gives significant flexibility for funding through farm-out, alternatively debt finance is expected to be available following a successful appraisal program

- Karoon’s cash at bank as at 30/6/15 was A$553 million

- Maximum Economic Exposure for the phase 1 EPS is estimated to be approximately US$530M on a 100% basis
